EDUCATION

Northeastern University

Master of Science in Computer Science

Boston, MA

Sep. 2025 – May 2027

Global Academy of Technology

Bachelor of Technology in Computer Science

India

Jan. 2021 – July 2025

EXPERIENCE

Artificial Intelligence Intern Head

Nuevera Infotech Pvt Ltd

June 2024 – October 2024

Bengaluru, India

- Led and mentored 5 teams (30 interns) to design and deliver an AI-powered real-estate chatbot, overseeing requirements gathering, sprint planning, and development using Python, Rasa, and Flask
- Architected chatbot solution with NLP pipelines for intent/entity extraction, improving customer engagement
- Conducted weekly technical workshops and code reviews while triaging blockers to maintain delivery schedule

PROJECTS

Agentic Test-Repair System | *Python, Gemini API, pytest*

2026

- Building an autonomous agent that detects failing tests, localizes the fault, generates candidate patches via LLM calls, writes fixes to disk, and reruns the suite to verify the repair
- Designed the control loop with bounded retries and validation gates so no unverified model output reaches the codebase
- Evaluated on the 40-program QuixBugs defect benchmark, then flagged training-data contamination behind near-perfect pass rates and moved evaluation to a harder held-out suite

Solar Mapper | *Python, Django, REST APIs, Leaflet, SQLite*

2026

- Built a Django app that maps US commercial sites on an interactive Leaflet map and estimates solar potential via the NREL PVWatts and Solar Resource APIs with address geocoding
- Designed a layered architecture with re-runnable management commands driving a geocoding and data-fetch pipeline gated by a per-site status state machine

REST Country Data Platform | *React, TypeScript, Go, AWS, CI/CD*

2025

- Built full-stack app with React frontend and Go RESTful API (OpenAPI spec), with an automated GitHub Actions CI/CD pipeline deploying to AWS App Runner for zero-downtime releases
- Containerized services with Docker Compose and integrated Redis caching to cut redundant upstream calls and improve response latency under load
- Instrumented the platform with Prometheus and Grafana for metrics and monitoring across API performance and deployment health

VIAIT - Network Anomaly Detection | *Python, Machine Learning, Data Analysis*

2024

- Built an ML anomaly detection system on 16M+ network traffic records (CSE-CIC-IDS2018) to identify cyber-attacks and suspicious patterns
- Optimized the Python/Pandas pipeline to cut analysis time from 30 minutes to under 2 minutes while maintaining 95%+ detection accuracy

PUBLICATIONS

“Enhancing Network Security through a Multi-layered Honeypot Architecture with Integrated Network Monitoring Tools,” *2024 11th International Conference on Computing for Sustainable Global Development (INDIACom)*, IEEE Xplore, 2024

TECHNICAL SKILLS

Languages: Java, Python, C, SQL, JavaScript, HTML/CSS

ML/AI Frameworks: TensorFlow, Keras, Rasa, PyTorch, Scikit-learn

Libraries & Tools: Node.js, Pandas, NumPy, Matplotlib, Flask, React, Django, NLP, Docker, Git, AWS, CI/CD, REST APIs, Google Colab

Databases: MySQL, SQLAlchemy

Security & Auth: JWT, OAuth, XSUA

Leadership & Coordination: Sprint planning, Agile/Scrum, Stakeholder management, Metrics tracking, Documentation
